1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-83 are rejected under 35 U.S.C. 103(a) as being unpatentable over BAKER et al. (5,363,475) in view of COOK et al. (The Reyes Image Rendering Architecture).

As per claim 1, Baker teaches the claimed “method for displaying a first image on a display device” comprising:

“Assigning sample patterns to each pixel” (Baker, figure 27);

“Determining if the first image intersects any of the sample location” (Baker, figure 27, “Position Fragment”); and

“Illuminating pixels” (Baker, figure 33).

It is noted that Baker fails to teach “each sample pattern having at least one sample location” as claimed. However, such “sample pattern having at least one sample location” is well known in the art (see Cook, figure 4). Thus, it would have been obvious to a person of ordinary skill in the art at the time the invention was made, in view of the teaching of Cook, to configure Baker’s system as claimed.

Claims 2-16 add into claim 1 the details of process which Baker teaches in figures 10-19. Due to the similarity of claims 17-83 to claims 1-16 they are rejected under a similar reason.

Art Unit: 2671

Accordingly, the claimed invention as represented in the claims does not represent a patentable distinction over the art of record.
